

FOR IMMEDIATE RELEASE

## Handshake Software Partners with Mobile Helix for Secured Mobility Container

*Mobile Helix LINK now available for secured Microsoft SharePoint mobile deployment*

**Alpharetta, Georgia – February 3, 2016** - Handshake Software, Inc., the market leading, award-winning provider of SharePoint-based products and services to the legal market, today announced its strategic partnership with Mobile Helix, an innovator in encrypted mobile solutions for lawyers. As part of the partnership, Mobile Helix' LINK secure container app for mobile, including Second-factor Authentication for greater identity protection, is now available to all Handshake Software Microsoft SharePoint customers. Deploying LINK gives law firm users secure access to all of their Handshake Software Microsoft SharePoint portal resources directly from their mobile devices.

LINK is a secure container app which ensures that data and documents remain encrypted and encapsulated at all times. LINK employs single sign-on to access DMS, Email, Calendar, SharePoint, and firm intranet applications. With LINK, lawyers work from anywhere, at any time while firms can be confident that proprietary data is protected. In addition, the LINK app may be remotely wiped and locked.

Handshake Software greatly reduces the time, effort and cost of integrating and presenting business information with Microsoft SharePoint, Search, Microsoft Office and mobile devices and facilitates firms' knowledge management initiatives with its 'All Knowledge, One Place' approach.

"As more firms are turning to Handshake Software for their SharePoint portal, extranet and search solutions, the ability to offer a desktop portal-like experience on mobile devices without compromising security is significant. Our LINK mobile solution makes this possible without coding and is another example of the traction we've gained with leading legal technology companies including Handshake Software," said Seth Hallem, CEO and co-founder of Mobile Helix.

“Our partnership with Mobile Helix provides Handshake Software clients with additional options when it comes to securely accessing their SharePoint Portal content from mobile devices,” said Glenn LaForce, executive vice president & chief strategy officer. “We recognize that law firms and their clients each have different security needs when it comes to their mobile solutions, so providing our product in the LINK secure container is a best practices solution.”
