Senior Software Development Engineer – Remote

Work Is Changing

Join us in creating a new way to work from mobile devices. We are working with the world's largest and most security-conscious law firms to give their lawyers a new, productive way to work from smartphones and tablets. Attorneys can work from a single, secure app. Workflows are integrated and easy. And the legal market is just the beginning. LINK's security and ease-of-use on mobile devices fits a need which is unmet enterprise-wide. Think, beyond Virtual Desktop, which is a poor experience on mobile devices.

Our LINK app is a single, encrypted app which provides attorneys and knowledge professionals with the applications and files which they need to work productively from smartphones and tablets. Given the proprietary nature of the data, the requirement for data security is high. At the same time, the LINK app must be frictionless, and of course, delightful to use.

What we are looking for:

- Linux-based, Java development experience is ideal.
- An adaptable, technical mind with an interest to investigate different technologies, understand them, and implement them.
- A willingness to dive into new areas from first principals and to build new expertise in technologies and systems that are completely new and unknown.
- A colleague and collaborator who earns the respect of her or his colleagues through hard work, clear communication, integrity, and follow through.
- A team-minded individual who understands that personal growth and success is born from the company's growth and success.

You need to have deep software development experience and the know-how to take on new development challenges. We can teach the right engineer the specifics of how to work with our LINK system.

Your Contributions:

- Develop new applications and services for the LINK App and future products
- Contribute to the migration of LINK middleware to the cloud
- Continuous improvement and streamlining of LINK deployment for customers
- Participate in customer deployments and customer support
- On-going development of our cloud-based infrastructure
- Testing of new applications and services on different platforms
- Support security certifications and audits

We offer:

- The opportunity to make a difference in a growing company
- The opportunity to experience the impact of your work through direct interactions with our customers
- Challenge and independence, yet in a team-oriented environment
- Casual, flexible, and entirely remote-work environment
- Generous PTO (Paid Time Off) policy
- Health benefits
- Stock options – we have a share option pool to allow employees to take part in our success

Our Values

- To respect and have empathy for colleagues and others in our wider community.
- Keep growing. Be it new languages or security threats, we work in a rapidly changing environment. In all areas of the company, we must learn new skills in keeping with the times. If there is something which you need to enhance your learning, let us know.
- We are very customer focused. We listen carefully and communicate clearly. We make thoughtful commitments. It's important to us to meet them.
- Security, both in our products and in our processes, is paramount. Each of us has a role.

Our Mission

To deliver highly secure and delightful-to-use business solutions across multiple platforms. In doing so, we are making it easier for people to work.

Diversity & Inclusion

At Mobile Helix we believe that a rich company culture and enjoyable workplace requires creating an inclusive and diverse environment. Mobile Helix strives to be a safe environment for everyone to be listened to and respected. Any exceptions to this should be brought to executive management.

We Would Like to Hear from You
